

kit+ty

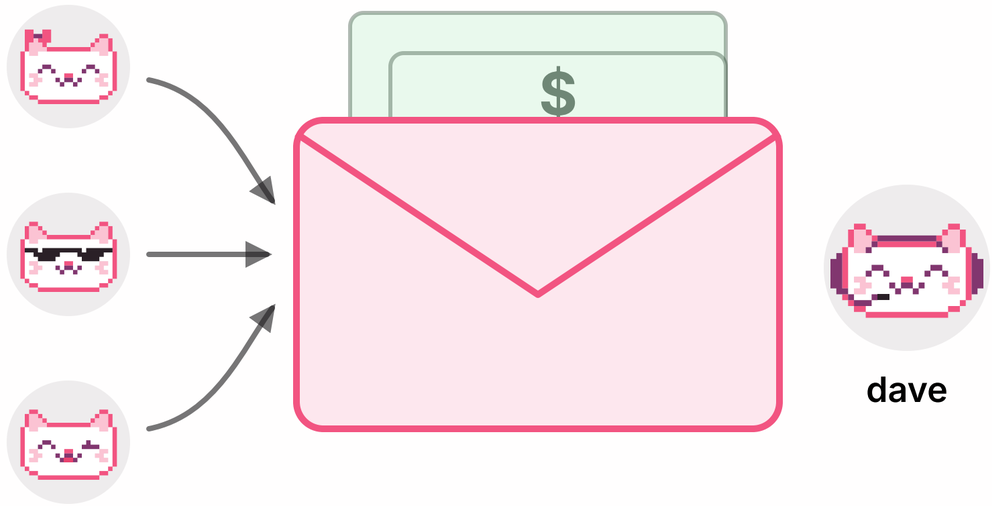

The shared kitty for group trips, with no one holding the money.

Paolo · Federico · Marco

Agentic Dollars on Bitcoin · BLOX Torino · 17–18 Oct 2026

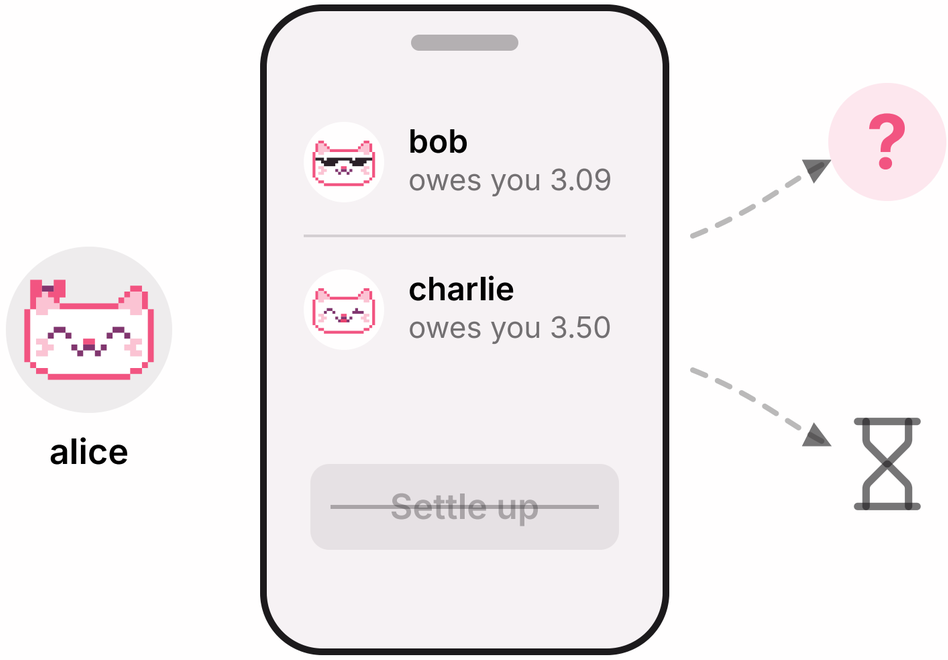

THE PROBLEM

Shared costs today

The cash envelope

one custodian · no visibility

The split app

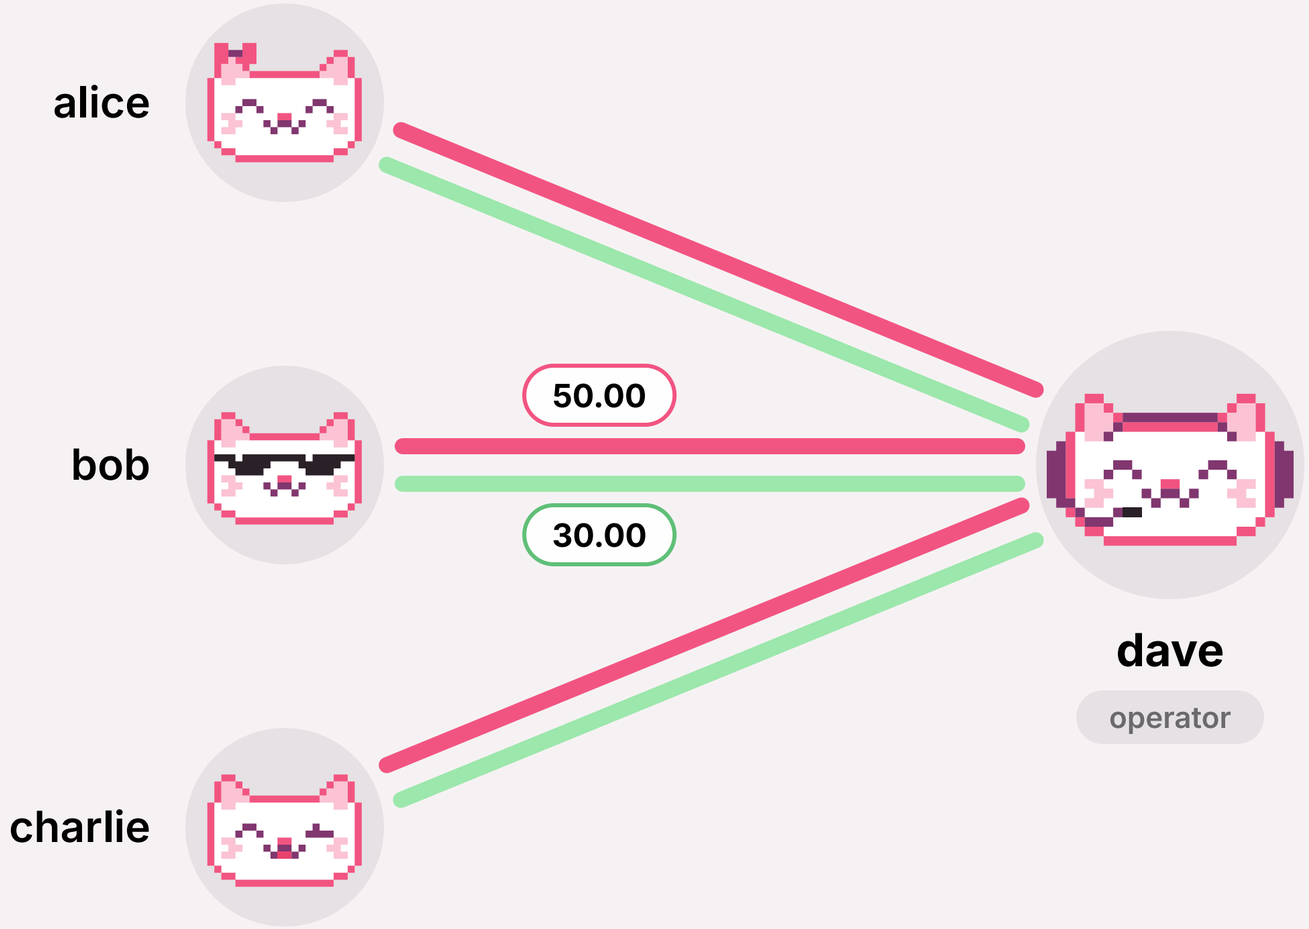

calculates · never pays

kit+ty

SELF-CUSTODY

Your dollars stay in your channel

Nobody holds anyone else's funds. Not even the operator.

Trip channel

D = 50.00 DUSD

Yours. Only you can spend it.

Liquidity channel

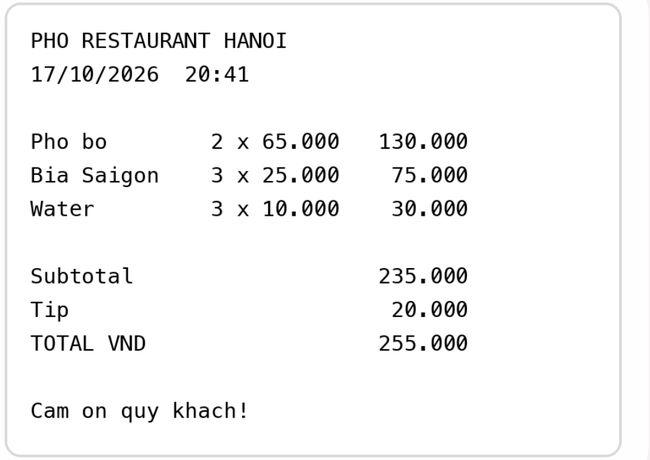

L = 30.00 DUSD

Operator's. Lets you receive.

kit+ty

ON-DEVICE AI

AI proposes. Ledger computes.

The photo never leaves the phone

QVAC

OCR + Qwen3 1.7B

on the phone · Wi-Fi off

“Bob and I had the pho, Charlie only beers, water for all three”

AI proposes

WHO HAD WHAT

Pho bo ×2	
Bia Saigon ×3	
Water ×3	
Tip	proportional

Ledger

deterministic code

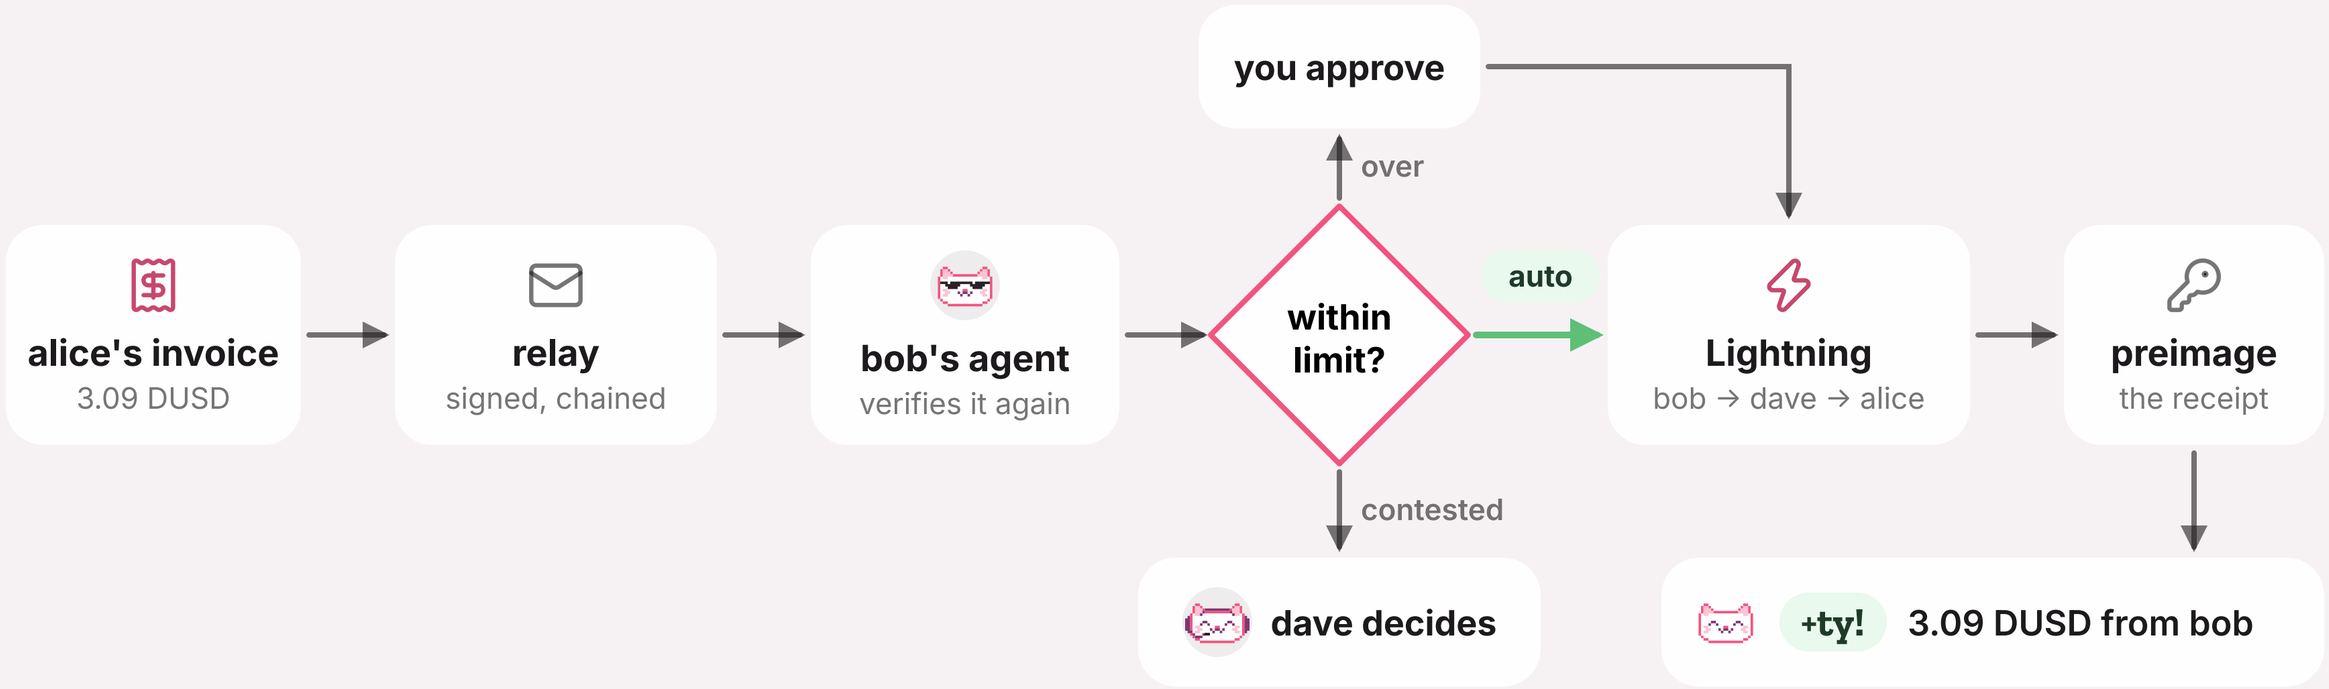

bigint cents

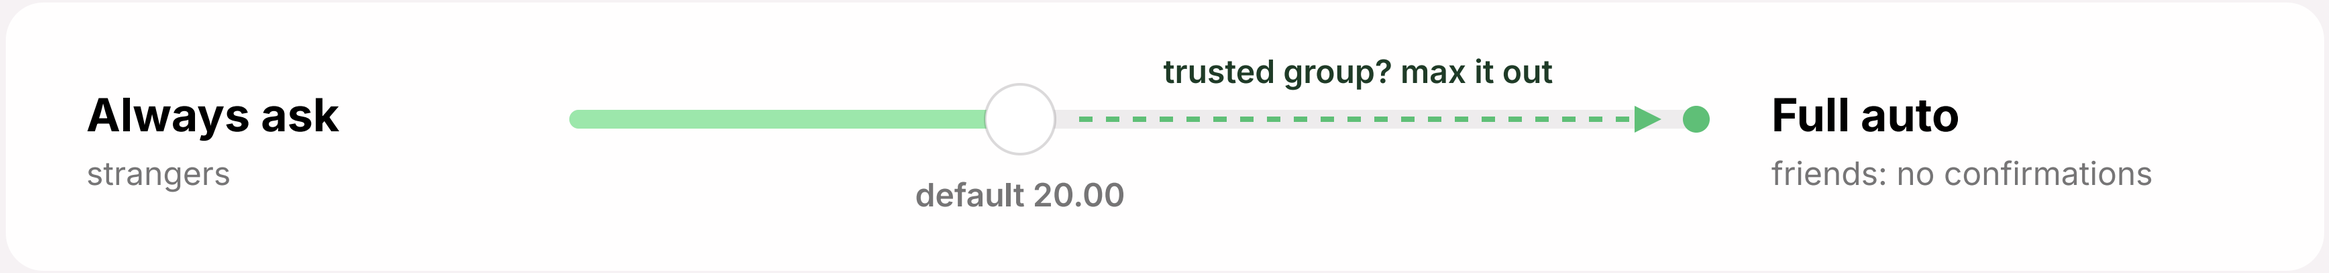

Ledger computes

alice	3.09
bob	3.09
charlie	3.50

kit+ty

Your agent pays, within your limits

kit+ty

WHEN IT GOES WRONG

When someone won't pay

1

Contest

charlie disputes a line

dave upholds or voids it

2

Cover

dave pays the same invoice

operator's money, up to G = 50.00

+ty! **alice is paid**

3

Exclude

both channels closed

charlie's funds back on-chain

Dave can be annoying. He can't steal.

TRUST

The relay is just a postman

EXPENSE_SUBMITTED seq n

 signed by alice ✓ sig

prevHash →

LINE_SEEN seq n+1

 signed by bob ✓ sig

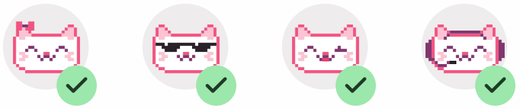

prevHash →

PAYMENT_MADE seq n+2

 signed by bob ✓ sig

relay

orders and delivers · holds no key

every agent re-checks every event

PAYMENT PROOF

- ✓ `sha256(preimage) = paymentHash`
- ✓ invoice signed by alice's node
- ✓ amount = the line

kit+ty

STACK

What it runs on

QVAC
local AI · OCR + Qwen3 1.7B

Ledger
pure rules · bigint cents

rgb-lightning-node
one per member · d4762ac

WDK wallet-rgb
treasury · issue, on-ramp

DUSD
RGB NIA asset · stand-in for USD₮

Bitcoin regtest
every payment, open and close is a real RGB operation

3.4 s
routed payment, alice → dave → bob

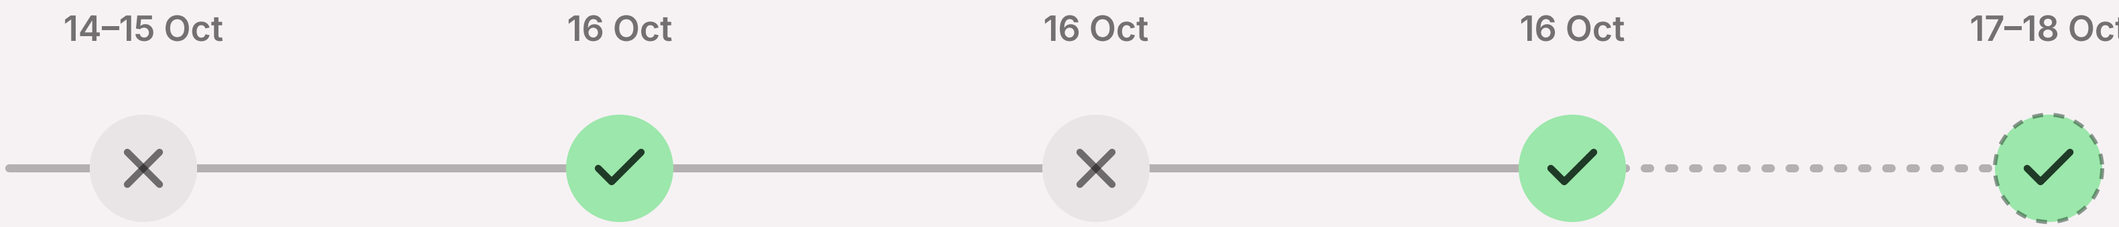

0
blocks mined per payment

26 / 30
receipts read with ≤ 1 fix

kit+ty

STACK

The roads we tried

Custodial prototype

someone held the money: dropped

Spike 1 · RLN REST

channels, routing in 3.4 s, close + sweep

Spike 2 · WDK rgb-lightning

signer lost on restart, no sweep, VSS restore hangs

Mixed engine

RLN nodes + WDK treasury

in the demo

Submarine swap

one channel per traveler · 20/20 cases

branch

kit+ty

ROADMAP

What's next

NEXT

Speech to text
dictate the split, on-device

Submarine swap
one channel per traveler · already on a branch

Profile setup

Member → coordinator
any member can run a group

Full auto mode
for groups of friends

THEN

Native mobile app
agent + node on each phone

WDK Lightning node per member
with VSS backups

Independent watchtower

More hubs, blinded paths
the operator stops seeing every payment

kit+ty

One product, two markets

kit+ty

B2B2C

Group tour operators

fee per traveler, per trip

operator guarantees

competitor: the cash envelope

operator

B2C

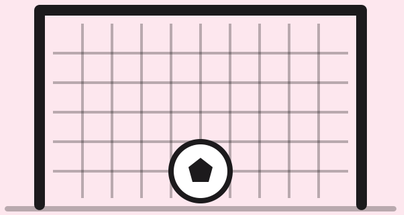

Friends who trust each other

Full auto

no guarantor needed

Same product. Much bigger market.

Open goal.

Nobody held anybody's money.
